Conclusion

In the framework of the Galileo Concession, the Concessionnaire will have a key role of coordination of the Galileo Services and ensures their availability on a permanent basis during the concession lifetime.

Inavsat proposes Innovative Solutions for the Risk Management of the Space Infrastructure and Third Party Liability which addresses the specificities of the Galileo program in an efficient way.

Thanks to its extensive experience in Risk Management, Inavsat is confident that those solutions will meet the expectations of the Public Authority and will be in line with the evolution of the Insurance Market.
